

Medical imaging technology has transformed patient care. Recent advancements have enabled faster diagnosis with less invasive procedures and more targeted treatments. Access to medical images is as important for telehealth as in-person care.

Our Medical Imaging module or stand-alone Cloud Imaging solution makes access to medical imaging quick and easy for distributed care team members to:

- Work on a web portal - no hassles with VPN connections or multiple logins to third party instances of PACS
- Leverage hi-res displays and existing computer devices

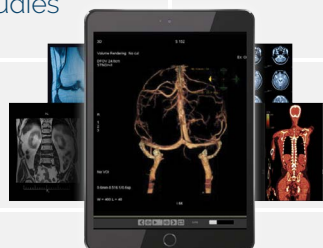

ViTel Net's telehealth platform allows your care team to view:

- Radiology modality 2-D and 3-D imaging -i.e., DR, CR, CT, MRI or Ultrasound studies

- GI endoscopy color images

- Ophthalmology external eye and retinal images

- Dermatology and wound images

- EKG 12 lead or rhythm strip reports

- Digital Pathology slide images

Automating and simplifying data and work flows, so clinicians can focus on patient care, anywhere.

ViTel Net Advantage	Why that matters
Easy access to high resolution medical images and clinical info with a video encounter, when needed	Access to data <ul style="list-style-type: none">All relevant patient data and images available within the same interface - no toggling between applications
Secure cloud imaging web portal	Safe and simple clinical collaboration <ul style="list-style-type: none">Authorized role-based users easily upload or import medical images from PACSSimple, browser-based clinician access to images for review and assessment
Single sign-on across multiple applications, configured to clinician's preferred workflow	Rapid provider adoption and acceptance <ul style="list-style-type: none">Eliminate frustrations with multiple sign-ons and difficulty finding relevant patient data
Fully integrated with your PACS using an advanced, embedded multi-modality image viewer with analysis and annotation tools	Greater Clinician efficiency <ul style="list-style-type: none">Fully capable imaging diagnostic tools included; clinical context maintained across image modalities
Integrated with your existing investments	Cost-saving affordability and sustainability <ul style="list-style-type: none">No software client installation and minimal investment in single purpose hardware

Provider and Health System Benefits

Enhanced productivity, saving clinicians valuable time

Improved care, continuity, and quality across settings

Flexibility, and compatibility with future imaging solutions

Better access to remote data sources
