

vCareNterprise™

Enterprise Telehealth | Built to Scale

Solution Overview

Built to flexibly support complex health systems with established health IT infrastructure and associated workflows, vCareNterprise is a comprehensive, but modular, virtual care solution for enterprise health systems. With configurable user experiences to support a health system's unique brand of care across the entire continuum and seamless integration with the EHR and other health IT infrastructure, vCareNterprise powers unparalleled quality virtual care. Designed for organizations that support multiple service lines, locations, and partner hospitals; vCareNterprise enables configured and integrated environments that prioritize simple, informed and streamlined patient care.

CURRENTLY AVAILABLE

Use Cases

- + Provider to Provider Consultations (all specialties)
- + Population Health Management
- + Remote Patient Monitoring
- + Patient to provider Behavioral Health
- + Patient to provider Urgent Care Clinics
- + Patient to provider Primary Care Clinics
- + Community Health Clinics
- + First Responder In-field Consults

Single Sign-On - Drive adoption with our integrated single sign-on approach that simplifies user experiences by eliminating extraneous logins while enhancing security by centralizing user management.

Scheduling - Streamline management of equipment, provider schedules and patient appointments across multiple clinics with multi-dimensional scheduling

Embedded Multi-party Videoconferencing - Add language interpreters, family caregivers or additional care team members to any consult and share content for better understanding

Documentation - Providers can document directly in the EHR or leverage our configurable documentation templates for more flexibility. Either way, our robust EHR integrations make it a seamless experience

Integrated Medical Imaging - With PACS integration, access medical imaging with analysis tools from within any virtual care encounter using our advanced HTML5 image viewer that supports a broad spectrum of image formats, including high-res radiological image studies

Consent Management - Automate informed consent process with patient electronic acceptance that can be attached to the patient record in the EHR upon completion

Technology Self Test - Enables patients and providers to ensure their equipment is working and ready for a successful virtual visit with access to helpdesk support if it is not

Virtual Waiting Room - Enables patients to check in for their virtual visit and consume content while they wait privately for their visit to begin

Secure Messaging - Increase patient and provider engagement with easy to use secure messaging that streamlines collaboration and content sharing (images, documents, and more)

Medical Device Integration - Both real-time remote physical examination tools and asynchronous connected devices for vitals capture of monitored patients

Worklists and Clinical Dashboards - Tools to enable providers to efficiently manage virtual care encounters or patient populations

Notifications and Alerting - Configurable email, SMS notifications and alerts that reduce no-shows and keeps patients and providers engaged at all times

Robust Reporting and Analytics - Drive informed decisions and proactively address operational deficiencies with comprehensive telehealth business intelligence that aggregates operational and clinical across the organization

ePrescribe - Transmit prescriptions directly to patient pharmacy from within the web app

eCommerce - Capture credit card payment or copayment directly from patient online
