

Rural Community Access to Specialty Care as a Shared Service

What We Do

Timely access to specialty care remains a significant challenge for the rural and frontier communities your partner organizations serve. We partner with organizations like yours to build shared tele-specialist programs that enable rural hospitals and clinics to achieve the scale required for affordable and sustainable access to specialty care.

The Challenges of Cross-Organizational Rural Specialty Care Delivery

In a single organization, care teams rely on centralized workflows and patient data within the EHR to deliver consistent and informed care. But when remote care is delivered across multiple organizations with different EHRs, workflows get broken, creating the following gaps:

- + **No centralized workflow** application that facilitates multi-team coordinated care delivery
- + **No reliable, secure method** to deliver timely consult notes back to the local care team's EHR
- + **Disconnected silos of patient data** that present hurdles to access and slow care delivery
- + **Insufficient pool of providers** for a given specialty to staff the program
- + **Small or independent care organizations lack** the economies of scale to sustain such a program on their own

How We Solve the Challenges

- ✓ ViTel Net delivers an integrated approach, combining technology, a robust ecosystem of partners, and a proven care delivery model to power scalable and sustainable remote specialty care programs that fully address the challenges of cross-organizational rural specialty care.
- ✓ No-code configurable web applications that facilitate and automate care coordination and delivery across multiple vendor EHR environments
- ✓ Integrated and automated data exchange with participating site EHRs and state HIEs for unobstructed real-time access to patient data, no matter where it resides

- ✓ Automated, reliable and secure transmission of consult notes back to the local care team's EHR for timely access to recommendations and treatment plans.
- ✓ Provider partner network that can supplement local specialist resources or fully staff programs where local specialists aren't available
- ✓ Collaboration with organizations like yours that aggregate small and independent care organizations to participate in affordable and sustainable shared services programs

Examples of Where We've Made a Difference

ViTel Net has a proven track record of supporting and scaling remote specialty care programs that deliver measurable impact across states and health systems.

Why Now?

Tele-Specialty programs align perfectly with the Rural Health Transformation Program objectives and requirements. RHT grants represent a once in a generation opportunity to provide the seed funding to launch and grow programs that achieve economies of scale for rural community care providers, **ensuring sustainability long after the RHT program concludes.**

The Value of Our Ecosystem

As a founding member of the Rural Health Transformation Alliance, ViTel Net connects RHT grant applicants to a broad ecosystem of pre-vetted partners, enabling access to a comprehensive range of capabilities while reducing the time and resources required to plan and execute, including:

Let's Do This Together

Partnership is the cornerstone of success in transforming rural health.
